

# SupplierPortal

Improved Supply Chain Management

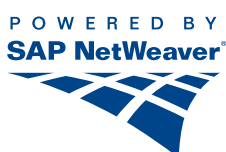

## Business Issues

- Are manual interactions with your supply chain slowing down your business?
- Is the information disconnect leading you to carry a higher inventory?
- Are your resources spending more time in expediting orders?

## Solution

- Real-time and secure web based portal solution for collaboration with suppliers.
- Self service function for suppliers to receive and update current information.
- Alerts, Reports and Message Boards with access to same information for suppliers and buyers.

SupplierPortal is a SAP NetWeaver based portal that provides secure access to supplier facing transactions and information through a browser. This solution helps suppliers access information and services most important to doing business with your company. It also enables buyers and suppliers to have the same view on the transactions, thereby helping you meet your customer demand effectively.

## Features

### Collaborative Order Management

SupplierPortal enables manufacturers to collaborate with suppliers and ensure they receive materials needed to fulfill customer demand. This includes order confirmations, delivery notifications and RFQs.

### Alerts and Notification

Suppliers and buyers receive real-time alerts and notifications on deliveries, JIT Calls, open RFQ's and payments.

### Materials Management

SupplierPortal also helps manage inventory levels throughout the supply chain and execute material management strategies including electronic triggers for KANBAN items and alerts for open RFQs.

### Status Reports

Overdue Shipments, Upcoming Shipments, Scheduling Agreements, JIT Calls, Payments and Open Payables, supplier performance.

### Self Service

The solution provides self service scenarios for suppliers including invoice tracking, payments and the ability to retrieve purchase order history including schedule lines and goods receipts notifications.

### Supplier Message Board

SupplierPortal enables buyers and suppliers to exchange messages, assign tasks and start workflow with context specific information that allows them to collaborate and track effectively.

### Reduced TCO

SupplierPortal is a secure, easy to deploy and rapid go-live solution based on your existing SAP ERP implementation.

### Security

The in-built security features and role based infrastructure ensure access only to supplier's own and authorized information and functions.
